CANTEEN TOWNSHIP, CASEYVILLE TOWNSHIP

ST. CLAIR TOWNSHIP

THE FOLLOWING ITEMS MUST BE ADDRESSED.

A. Changes to best management practices (check appropriate BMP change(s) and attach information regarding change(s) to BMP and measurable goals.)

- | | | | |
|--|--------------------------|---|--------------------------|
| 1. Public Education and Outreach | ☐ | 4. Construction Site Runoff Control | ☐ |
| 2. Public Participation/Involvement | ☐ | 5. Post-Construction Runoff Control | ☐ |
| 3. Illicit Discharge Detection & Elimination | ☐ | 6. Pollution Prevention/Good Housekeeping | ☐ |

B. Attach the status of compliance with permit conditions, an assessment of the appropriateness of your identified best management practices and progress towards achieving the statutory goal of reducing the discharge of pollutants to the MEP, and your identified measurable goals for each of the minimum control measures.

C. Attach results of information collected and analyzed, including monitoring data, if any during the reporting period.

D. Attach a summary of the storm water activities you plan to undertake during the next reporting cycle (including an implementation schedule.)

E. Attach notice that you are relying on another government entity to satisfy some of your permit obligations (if applicable)

F. Attach a list of construction projects that your entity has paid for during the reporting period.

Any person who knowingly makes a false, fictitious, or fraudulent material statement, orally or in writing, to the Illinois EPA commits a Class 4 felony. A second or subsequent offense after conviction is a Class 3 felony. (415 ILCS 5/44(h))

Introduction

In 2003, St. Clair County (County), Illinois and its communities created a Co-Permittee Group to join forces in complying with the National Pollutant Discharge Elimination System (NPDES) for Municipal Separate Storm Sewer Systems (MS4) Phase II requirements. As stated in the original 2003 Notice of Intent (NOI), the County and the Co-Permittee communities were to pool resources and work together to comply with the commitments made within the NOI for the benefit of all within the County.

The Co-Permittee Group was active during this reporting period. Significant progress was made sharing Best Management Practices (BMPs) for document retention, operation procedures, and maintenance activities.

Best Management Practice (BMP) Summary of 2023-2024 Activities

In 2003, each member of the Co-Permittee Group submitted a NOI in compliance with the first 5-year cycle. In 2008, a NOI was submitted in compliance with the next 5-year cycle, as written in the first MS4 permit. The 2009 NOI was submitted in compliance with additional requirements in the second MS4 permit. In 2013, a new NOI was submitted and the last NOI was submitted in 2021. As stated in each NOI, each Co-Permittee Member identified certain activities to comply with the Phase II requirements. Below is an abbreviated summary of the BMPs that were written in the NOI for each of the minimum control measures.

March 2023-February 2024:

- 1) **A.1-** Stormwater brochures for businesses, homeowners, children, and green infrastructures were to be promoted and displayed by each community in a public place.
- 2) **A.4-** St. Clair County sponsored a booth at the County Fair and/or Earth Day and distributed the storm water and green infrastructure brochures.
- 3) **A.5-** St. Clair County posted newsletters on the County Health Department website during school months. Co-Permittee Members distributed educational materials to schools in their communities. The amount of material distributed was to be tracked by the communities.
- 4) **B.3-** The Co-Permittee Group met four (4) times to review upcoming permit requirements, notice of intent, review stormwater management program, operations training, and to develop and submit the Annual Report.
- 5) **B.5-** Co-Permittee Members solicited and encouraged public assistance in monitoring the community's stormwater system. Public inquiries and complaints were responded to and recorded.
- 6) **B.6-** St. Clair County continued to promote programs related to stormwater activities and recycling programs. The community tracked its participation.

- 7) **B.7-** Co-Permittee Members will provide a public meeting annually for public input.
- 8) **C.1-** Co-Permittee Members updated any new or revised storm sewers and performed stream observations at bridge inspections.
- 9) **C.5-** A survey of previously installed stencils was to be performed as well as replacing or placing any that needed inlet stencils.
- 10) **C.6-** Communication brochures were distributed to the community. Co-Permittee Members discussed any known illicit discharge ordinance compliance issues.
- 11) **C.9-** Co-Permittee Members developed brochures addressing specific stormwater ordinance prohibited activities and distributed with educational brochures.
- 12) **D.1-** Require SWPPP on site plans disturbing more than one acre.
- 13) **D.2-** The Co-Permittee will hold a BMP Training class.
- 14) **D.5-** St. Clair County Continued to Maintain a stormwater hotline number to address public concerns related to stormwater issues. County tracked and reported the number of calls.
- 15) **E.2-** Enforce Stormwater Ordinance and track changes made to the ordinance.
- 16) **E.4-** Require and review SWPPPs on site plans disturbing more than 1-acre of land.
- 17) **F.1-** the Co-Permittee will hold an Operations Training class focused on a review of the history of drainage systems, the Clean Water Act and NPDES permits, and the impacts of stormwater.
- 18) **F.6-** Communities reviewed operating procedures and BMPs and modified, if necessary.

The following pages highlight changes made to the BMPs from the NOI, BMP status, and activities planned for the next reporting year. Additional information is also provided from the County and each Community.

City of : City of Fairview Heights

Telephone Number: 618-489-2018

IEPA Annual Report for Stormwater Discharges from MS4 Communities- Period: March 2023 through February 2024

A. Changes to Best Management- Were there any changes to the BMPs?		B. The status of compliance with the permit, the appropriateness of the BMP and progress towards achieving reduction of discharged pollutants to the MEP, and identified measurable goals for each of the minimum control measures		C. Provide results of information collected and analyzed, including monitoring data. Information attached?		D. Summarize the stormwater activities you plan to undertake with an implementation schedule.	
Comment	YES	NO	If attached information, describe.	YES	NO	Activity	Schedule
BMP No. A.1 - Distributed Paper Materials- Informational Brochures							
Milestone For Reporting Year: Promote the availability of brochures to the residents.							
	☒		The City has brochures available to residents at City Hall, Public Library and City Rec. Center. Educational topics include paint and related decor, lawn and garden care, illicit discharge ordinance compliance, and stormwater ordinances. The St. Clair County storm water hotline number is included.	☒		The County will continue to make educational brochures available to the public.	Ongoing through 2021-2026 permit year.
BMP No. A.4- Community Event- Sponsor Annual Booth at St. Clair County Earth Day Festival							
Milestone For Reporting Year: St. Clair County sponsored a booth at the Earth Day Festival.							
	☒		There was no "Physical Attendance" Earth Day this year but the St. Clair County Health Department sent out information to the schools.	☒		St. Clair County is responsible for the booth and tracking the number of brochures handed out.	Ongoing through 2021-2026 permit year.
BMP No. A.5- Classroom Education Material							
Milestone For Reporting Year: County posts a newsletter on County Health Department website for students during the school months.							
	☒		St. Clair County posted educational newsletters on the Health Department's website.	☒		The communities will inform local schools that the newsletters are available on the Health Department's website.	Ongoing through 2021-2026 permit year.

COMMUNITY NAME:

IEPA Annual Report for Stormwater Discharges from MS4 Communities- Period: March 2023 through February 2024

A. Changes to Best Management- Were there any changes to the BMPs?		B. C. Provide results of information collected and analyzed, including monitoring data. Information attached? If attached information, describe.		D. Summarize the stormwater activities you plan to undertake with an implementation schedule.				
Comment	Yes/No				Yes/No	Activity	Schedule			
BMP No. B.3- Stakeholder's Meeting- Coordinate Meetings and Annual Reports, Sponsor Various Programs										
<u>Milestone For Reporting Year:</u> Co-Permittee Group met four (4) times to complete training and to develop and submit the Annual Report.										
☒	☒	Co-Permittee Meetings were held on March 7th, June 6th, September 19th, and December 5th, 2023. Annual reports were provided to communities in May 2023 and submitted to IEPA before June 1st, 2023. Meeting topics included: Annual Reporting, Data Collections, ILR40 Updates, Sediment & Erosion Control Training, Operations/Good Housekeeping Training, and Post-Construction Management Training.		See page 10 and Exhibits B.3-A to B.3-E for more information	☒	The County will continue to meet with the Co-Permittee Group to share BMP's and training opportunities. The Co-Permittee Group has planned four compliance/training activities the next Program year.	Ongoing through 2021-2026 permit year.			
BMP No. B.5- Volunteer Monitoring- Solicit and Encourage Public Assistance in Monitoring the Community's Stormwater System & Stormwater Hotline										
<u>Milestone For Reporting Year:</u> Community will work to involve more public assistance in reporting stormwater issues.										
☒	☒	The City and County encourage public assistance in monitoring the Community's Stormwater System. The County updates brochures and websites, as needed, with County contact information for the reporting of stormwater issues. Any calls or emails are recorded and addressed.			☒	The community will continue to respond to and record all public complaints of illicit discharge and/or dumping and stormwater issues.	Ongoing through 2021-2026 permit year.			
BMP No. B.6- Program Involvement- Participate in programs targeted at public awareness, including: Inlet Stenciling and Recycling										
<u>Milestone for Reporting Year:</u> St. Clair County continued to promote programs related to stormwater activities. Communities tracked participation.										
☒	☒	The City and County will continue to promote programs related to stormwater activities and recycling. Multiple media outlets will be used to communicate with municipalities.		See page 10 and Exhibit B.6-A for more information	☒	County will continue to promote programs related to stormwater activities. Multiple media outlets will be used to communicate with municipalities.	Ongoing through 2021-2026 permit year.

Summarize the stormwater activities you plan to undertake with an implementation schedule.	
Comment	Yes	No	Yes	No	Activity	Schedule	
BMP No. B.7- Other Public Involvement - The community will provide a public meeting annually for public input regarding the MS4 Program							
Milestone for Reporting Year: The communities will provide a public meeting annually for the MS4 program.							
	☒		See page 10 and Exhibit B.7-A for more information	☒	Community will continue to hold a public meeting to solicit public input regarding the adequacy of the MS4 program.	Ongoing through 2021-2026 permit year.	
BMP No. C.1- Storm Sewer Map Preparation							
Milestone for Reporting Year: County currently has 100% of outfall locations and names of receiving waters mapped for the Co-Permittee community.							
	☒		Co-Permittee communities reviewed their outfall maps for completeness and updated them, if necessary. The City currently has 100% of outfall locations and names of receiving waters mapped.	☒	Communities will begin/continue to update their storm system maps to include modifications to the system.	Ongoing through 2021-2026 permit year.	
BMPs No. C.5- Inlet Stenciling							
Milestone for Reporting Year: Survey condition of inlet stencils.							
	☒		The City has 100% of inlets marked. The Street Department will continue to monitor stencils, replacing as needed. Illicit Discharge Detection & Elimination training was covered during the June 6, 2023 Quarterly Meeting.	☒	Communities will survey samples of stencils previously installed, replace ones that need to be replaced, and assure all new inlets are installed with stencils.	Ongoing through 2021-2026 permit year.	
BMP No. C.6- Program Evaluation and Assessment							
Milestone for Reporting Year: Perform illicit discharge detection and elimination in the Community's stormwater system.							
	☒		Communities will perform stream observations during their annual bridge inspections or quarterly stormwater sampling and take appropriate action if any illicit discharge is found. The City performed illicit discharge stream monitoring at Ogles Creek @ Old Collinsville Rd. & Ogles Creek @ Scott Troy Rd.	☒	Communities will continue to perform stream observations and address illicit discharge per the community ordinance	Ongoing through 2021-2026 permit year.

BMP No. E.2- Regulatory Control Program							
Milestone for Reporting Year: Enforce County's Stormwater Ordinance							
	☒	☐	The City will continue to enforce the County's stormwater ordinance and track changes made to the ordinance. There were no changes this year.	☒	☐	Communities will continue to enforce their stormwater ordinance.	Ongoing through 2021-2026 permit year.
BMP No. E.4- Pre-Construction Review of BMP Designs							
Milestone for Reporting Year: Require a Stormwater Prevention Plan (SWPPP) on all site plans disturbing more than one acre of land and review post construction.							
	☒	☐	The City requires and reviews SWPPPs on site plans disturbing more than 1-acre of land. Post Construction Management Training was covered during the September 19, 2023 Quarterly Meeting.	☒	☐	Communities will review the post construction BMPs on all sites that disturb more than 1-acre of land.	Ongoing through 2021-2026 permit year.
BMPs No. F.1- Employee Training							
Milestone for Reporting Year: Community will participate in an annual Operations Training for employees whose job impacts stormwater runoff.							
	☒	☐	Operations Training was covered during the December 5, 2023 Quarterly Meeting.	☒	☐	The Co-Permittee Group will continue to review Operations Training at one meeting per program year.	Ongoing through 2021-2026 permit year.
BMP No. F.6- Other Municipal Operations Controls - Standard Operating Procedures							
Milestone for Reporting Year: Communities reviewed operating procedures and BMPs and modified if necessary.							
	☒	☐	Communities will continue to review their Standard Operating Procedures and modify, if necessary. The City had no changes this year.	☒	☐	Communities will continue to enforce their stormwater ordinance.	Ongoing through 2021-2026 permit year.

ADDITIONAL INFORMATION

BMP A.5	Classroom Educational Materials St. Clair County posted educational newsletters on the Health Department's website. See attached Exhibit A.5-A for more information.
BMP B.3	Stakeholder's Meeting - Coordinate Meetings and Annual Reports, Sponsor Various Programs The St. Clair County MS4 Co-Permittee Group held four quarterly training meetings during the 2023-2024 permit year. Topics covered included: Annual Reporting, Data Collections, ILR40 Updates, Sediment & Erosion Control Training, Operations/Good Housekeeping Training, and Post-Construction Management Training. Members were issued Certificates of Attendance and Training Completion. See attached Exhibit B.3-A to Exhibit B.3-E for additional details.
BMP B.6	Program Involvement-Participate in programs targeted at public awareness, including Inlet Stenciling and Recycling St. Clair County continued to promote programs and public awareness related to stormwater activities and recycling. See attached Exhibit B.6-A for additional details.
BMP B.7	Other Public Involvement - The community will provide a public meeting annually for public input regarding the MS4 Program The City held a Public Meeting to invite public input regarding the adequacy of the MS4 Program on February 14, 2024. No comments were received. The County held a Public meeting January 16, 2024 and no comments were received. See attached Exhibit B.7-A for additional details.
BMP C.5	Inlet Stenciling - Illicit Source Removal Procedures St. Clair County Highway Department sponsors Clean Sweep Program throughout the County. By sponsoring this program, St. Clair County is eliminating a significant source of stormwater pollution by keeping debris out of streams and road ditches. See attached Clean Sweep Spreadsheet with totals collected included: Exhibit B.6-A.
BMP D.2	Erosion and Sediment Control BMPs St. Clair County will provide annual BMP training at (1) Quarterly Meeting. See attached Exhibit D.2-A for more details.
BMP E.4	Pre-Construction Review of BMP Designs St. Clair County requires and reviews SWPPs on site plans disturbing more than 1-acre of land. Post Construction Management Training was covered during the September 19, 2023 Quarterly Meeting. See Exhibit E.4-A for more details. An RFQ has taken place for a consultant to write/review the City's Stormwater Code. The Consultant will be responsible for stormwater BMPs and management procedures being added to our Code of Ordinances.

Additional Community Activities

(Make additional copies of form, if necessary)

List any additional community-sponsored activities performed between March 1, 2023 and February 29, 2024 not listed in the *Notice of Intent* (NOI) submittal, but which address one of the six minimum control measures:

The City is developing a process to assess the water quality impacts of flood management projects affecting the municipality.

The City spent 80 hours grading ditches along Holy Cross Road, Old Bunkum Road and Harvey Lane collecting 5 tandem loads of debris. Straw mats, riprap and silt fence were the BMPs used.

The Street Department has (2) 20-cubic-yard dumpsters that are used by the City for trash retrieved from road ditches and waterways. They are located at the City Garage Facility and are emptied when needed.

The Street Department spent 715 hours street sweeping 5,000 miles of roadway collecting 865,000 pounds of debris and disposing in the 20 CY dumpsters.

The City cleaned 100 catch basins along South Bountiful Heights, Fox Creek and Sheryl Drive.

The City provides Christmas tree recycling with one drop off location at Moody Park and pickup service is provided through Aspen Waste.

The City supports Pharmaceutical collection for the City and Police Department with one drop off location at City Hall. They received 100 pounds of unwanted medication.

The City provides recycling for residents through Aspen Waste with pickup every two weeks.

The City installed 120 feet of 18" diameter pipe at "26 Pine Trail". The previous condition was overland rear yard drainage through a poorly maintained riprap swale.

The City installed 180 feet of 18" diameter pipe at "132 Edding Lane". The previous condition was an overland path that constantly scoured and eroded leading to a rear yard swale.

The City has one Certified Floodplain Manager (CFM) on staff.

St. Clair County Public Works - Work Order Spreadsheet - See Exhibit Additional Activities-A for details

St. Clair County Groups and Organizations - See Exhibit Additional Activities-B for details.

Stormwater Sampling was tested at Ogles Creek, Old Collinsville Road and at Scott-Troy Road. Teklab, Inc. analyzed the samples and results are kept at the City. See Exhibit Additional Community Activities-C for Reports

1st Quarter Sample Date: 2/16/23

2nd Quarter Sample Date: 6/08/23

3rd Quarter Sample Date: 9/21/23

4th Quarter Sample Date: 11/21/23

Subject: Earth Day handouts

Dr. Eichenlaub,

I have attached several pdf's of information about Earth Day 2023 and ground water information. Please feel free to push this information to all the schools so they may have the opportunity to take part in Earth Day 2023, with the hope they may establish a future celebration of their own.

If you have any question feel free to contact me.

Thank you,

Michael Gates, B.A.

SCHOOLS

CLIMATE LITERACY

- Use an [Advocacy Packet](#) to start advocating for sustainable initiatives in your community.
- [Sign the letter](#) to demand climate education from our global leaders.
- [Explore our toolkits](#) to learn about environmental issues and take action!

GLOBAL EARTH CHALLENGE

- Download the [Global Earth Challenge app](#) and collect data about air quality, plastic pollution, insects, and food in your community.
- Use the [air quality](#), [plastic pollution](#) and [insect](#) lesson plans for fun activities to do from home!

ARTISTS FOR THE EARTH

- Repurpose unused lockers as space for eco-art installations.
- Paint a mural in the hallway, cafeteria or outside wall.
- Host a recycled material craft event.
- Host an Earth Day poster, essay or poetry contest.

FOOD & ENVIRONMENT

- Host a book club on [plant-based eating and climate change](#).
- Implement composting program and meatless Mondays in school cafeteria.
- Start a school garden to grow fresh veggies for a local food kitchen.
- Offer plant-based options at school events like sporting events.

PLASTIC POLLUTION

- Host a plastic repurposing workshop.
- [Host a cleanup event](#).
- Invite local [speakers to a Teach-In](#).
- Collect difficult to recycle items (markers, glue containers, etc) to send off to be disposed of responsibly.
- Replace single use plastic items like cutlery and waterbottles.

BIODIVERSITY

- Plant a [pollinator garden](#) or designate no-mow zones on school grounds.
- Invite a local beekeeper to come [speak at a Teach-In](#).
- Host birdhouse or insect hotel building for your school.
- Watch species related films or documentaries and host a discussion.
- Host a fundraiser to plant trees with the [Canopy Project](#).

WHEN IT RAINS, IT DRAINS IT ALL HAS TO GO SOMEWHERE

Water from inside our homes goes to a wastewater facility for purification. But water from roofs, streets, and outdoor spigots goes untreated directly into storm drains - straight to our waterways - picking up all kinds of contaminants along the way!

DID YOU KNOW

Excess nutrients, specifically nitrogen and phosphorus, pollute stormwater run-off from urban areas, contributing to the **third greatest cause of lake deterioration** in the US.

DID YOU KNOW

That street-side landscaping is the glass cliff for rain runoff? Your lawn just since you produce up to 40 pounds of lawn waste each year that ends up in our lakes and streams.

DID YOU KNOW

That the rain runoff from your car is the most polluted? The average car wash produces 120 gallons of dirty water that flows untreated into storm drains that run into lakes and streams.

DID YOU KNOW

That one pound of fertilizer (even application) can pollute 34.2 pounds of excess dirt that ends up in our lakes and streams?

DID YOU KNOW

When you wash your car in the driveway, you're washing about **120 gallons** of grime-filled water downstream. The soap, together with the dirt, grease, and grime flows untreated into nearby storm drains that run into lakes and streams.

DID YOU KNOW

That owners don't clean up after their pooches? 300 million pounds of dog waste are flushed down the toilet every year. That's 300 million pounds of waste that ends up in our lakes and streams.

WHY IT MATTERS

Too many nutrients in streams and lakes cause rapid growth of algae.

Algae looks bad, smells bad, degrades water quality and can be harmful to your health.

As algae decays, it uses up oxygen in the water, leading to a decline in our drinking water quality - making it more expensive to treat.

WHAT YOU CAN DO

Dispose Properly

- Compost or bag your leaves and lawn clippings
- Don't blow leaves or lawn clippings into the street
- Sweep up any spills or overspray of fertilizers on sidewalks or streets

Fertilize Efficiently

- Always follow the manufacturer's application recommendations. More isn't better!
- Fertilizing in early fall promotes healthy root systems - leading to stronger, more resilient lawns and plants

Be Car Smart

- Use a commercial car wash where water is recycled and sent to treatment facilities
- Wash your car on the lawn or gravel
- Dump your soapy bucket in the sink

Pick It Up & Pitch It

- Clean up dog waste and dispose of it properly
- Pet waste bags are available in most city parks

For Businesses

- Do your part at work to prevent stormwater pollution
- Perform necessary maintenance to ensure stormwater ponds and drainage control structures stay clear of litter and excessive sediment buildup
- Properly dispose of chemicals and grease

For Contractors

- Special stormwater permits are required for most construction sites
- See CityofMontrose.org/Stormwater for additional details
- Report excessive dust or mud trackout from construction sites

Illegal Dumping

- Do not dump chemicals or other waste materials into storm drains — It's illegal
- If you see it, report it

Reporting

- Public Works 970.240.1480
- After Hours 970.249.9110

TAKE A DIP!

**STORMWATER POLLUTANTS
FIND THEIR WAY INTO WHERE
WE FISH, WHAT WE DRINK AND
WHERE WE SWIM.**

Everything that goes into our storm drains—grass clippings, soap, pesticides, pet waste, whatever—makes its way straight to our streams. Stormwater pollution is our biggest source of water pollution. It all adds up. It all comes back. **And you're the solution, now that you know where it goes.**

**What's wrong with
this picture?**

The people are taking care of their home and car, but they are doing many things that can damage the environment, especially our water.

Answers:

1. Car is leaking oil & antifreeze into the street
2. Sprinkler is watering the sidewalk.
3. Man is littering.
4. Raking leaves into plastic bags—use compost.
5. Pouring oil down sewer

Go to <http://www.epa.gov/OWOW/NPS/kids/whatwring.htm>

Click on the spots where you think someone is doing something wrong for an explanation and how we can do to protect our environment.

Stormwater Tips

- ⇒ Sweep driveways instead of hosing
- ⇒ Place trash in closed containers and pick up litter from others
- ⇒ Don't pour anything into the street or storm drain. It ends up in your rivers and streams
- ⇒ Pick up after your pet when you walk them

"Please don't soil our waters!"

It's no fish story: soil erosion is our #1 water pollutant.

What's wrong with soil? It keeps waterways full of silt and carries a lot of old and other chemicals that contaminate the water and lead to serious problems.

2023 Quarterly Meeting Agendas

**St. Clair County MS4 Co-Permittee Group
Quarterly Meeting Agenda
March 7, 2023**

Introductions

- ☐ Gonzalez Companies, LLC
 - Tony Schenk (tschenk@gocos.net) / (618) 222-2221 ext. 101
 - Jon Schaller (jschaller@gocos.net) / (618) 222-2221 ext. 119
 - Tammy Mezo (tmezo@gocos.net) / (618) 222-2221 ext. 118
- ☐ Co-Permittee Group Representatives – First Meeting

Open Discussion

- ☐ Updated Contact Information for Members
- ☐ Submission of NOI's for Change in Operator
- ☐ Submission / Confirmation of the RJN NOI's
- ☐ Preparation of Annual Reports –Data Collection Forms Due to Tammy April 7th

Past Events

- ☐ December 6th Quarterly Meeting
 - Permit Requirement Reminders
 - Green Infrastructure / Post-Construction Management Presentation
 - ☐ Presentation and Resources
 - ☐ Employee Training Videos and Other Resources

Permit Requirements Reminders Regarding Data Collections

- ☐ Public Education and Outreach - Brochures and Events
- ☐ Public Involvement and Participation – Annual Public Meeting
- ☐ Illicit Discharge Detection and Elimination (IDDE) – Quarterly Sampling
- ☐ Construction Site Runoff Control – Annual Training - Data Collections (June 7, 2022)
- ☐ Post-Construction Management – Annual Training - Data Collections (December 6, 2022)
- ☐ Good Housekeeping – Annual Training – Data Collections (September 6, 2022)

Program Year in Review / Data Collections / Permit Updates / Annual Reports

- ☐ Presentation and Resources
- ☐ New Permit Requirements / St. Clair County Current NOI / Annual Reports

Upcoming – Next Meeting Tuesday June 6th – 9:00 a.m.

- ☐ April – June – Submittal of Annual Reports – Due May 31st
- ☐ June 2023 – Illicit Discharge Detection and Elimination

**St. Clair County MS4 Co-Permittee Group
Quarterly Meeting Agenda
June 6, 2023**

Introductions

- ☐ Gonzalez Companies, LLC
 - Tony Schenk (tschenk@gocos.net) / (618) 222-2221 ext. 101
 - Jon Schaller (jschaller@gocos.net) / (618) 222-2221 ext. 119
 - Tammy Mezo (tmezo@gocos.net) / (618) 222-2221 ext. 118
- ☐ Co-Permittee Group Representatives – First Meeting

Open Discussion

- ☐ Updated Contact Information for Members
- ☐ Submission of NOI's for Change in Operator
- ☐ Submission of Annual Reports

Past Events

- ☐ March 7th Quarterly Meeting
 - Program Year in Review
 - Discussion on Data Collections and Status of NOI's
 - Discussion on Annual Report Timeline
 - Presentation and Resources
 - ☐ ILR40 Renewal / New Permit Requirements & Data Collections
 - ☐ Employee Training Videos and Other Resources

Permit Requirements Reminders Regarding Data Collections

- ☐ Public Education and Outreach - Brochures and Events
- ☐ Public Involvement and Participation – Annual Public Meeting
- ☐ Illicit Discharge Detection and Elimination (IDDE) – Quarterly Sampling (June)
- ☐ Construction Site Runoff Control – Annual Training - Data Collections (September)
- ☐ Post-Construction Management – Annual Training - Data Collections (September)
- ☐ Good Housekeeping – Annual Training – Data Collections (December)

Presentation and Resources

- ☐ Updated Data Collection Forms
- ☐ Illicit Discharge Detection and Elimination (IDDE)

Upcoming – Next Meeting Tuesday September 19th* – 9:00 a.m.

- ☐ September 2023 – Construction Site Runoff Control and Post Construction Management

* DATE CHANGE - THIS WILL BE THE THIRD TUESDAY OF THE MONTH

Subject: Wednesday - Issues & Eggs Panel Discussion

Good morning and thank you for agreeing to part of the Belleville Chamber of Commerce's Issues & Eggs on Wednesday, Oct 25. Location is Bellecourt Place 120 N. Jackson St., Belleville, IL. As a reminder registration is 7:00 am, Breakfast 7:30 am, Presentation 8:00 am and closing comments no later than 9:00 am.

See attached for the run of show. As mentioned previously we have included 7 minutes for each panelist. Unfortunately, Ken Sharkey will not be able to join us. We had 7 minutes programmed for both Ken and Rob. I'll provide a quick update of the MetroLink extension and then turn it over to Rob Wilson, so no significant changes.

The PowerPoint presentations that were submitted will be ready to go. Thank you again for taking time out of your schedule to be part of this program and your role with delivering regionally significant projects. Let me know if you need have any questions.

This message has been scanned for malware by FORCEPOINT. www.forcepoint.com

Caution: This is an external email. Please take care when clicking links or opening attachments. When in doubt, contact your IT Department.

Mary Lamie (2 – 3 minutes):

Good morning and welcome to the St. Clair County Multimodal Transportation Update. Today we'll hear from four of our region's transportation agencies all having a role with advancing key infrastructure projects in our community and the region.

Joining us today is:

- Kirk Brown, Region 5 Engineer with the Illinois Department of Transportation which includes 27 counties in southern Illinois.
- Kevin Scott, General Manager of Security with Bi-State Development, which operates Metro Transit for the St. Louis region
- Unfortunately, Ken Sharkey, Managing Director with St. Clair County Transit District could not be with us today.
- Rob Wilson, Director with Alternative Transportation System

And

- Norm Etling, St. Clair County Engineer

Kirk Brown will start with you

Kirk Brown (7 minutes):

Mary Lamie

Next, we have Kevin Scott with Bi-State Development

Kevin Scott (7 minutes):

Mary Lamie

As I mentioned previously St. Clair Co Transit Ken Sharkey could not be with us today. We wanted to include a quick update of the MetroLink expansion and were provided the following information.

Our next panelist is Rob Wilson with Alternative Transportation System.

Rob Wilson (7 minutes) :

Mary Lamie

Saving the best for last and wrapping up our roadway improvements in St. Clair co we have Norm Etling, St. Clair County Engineer

Norm Etling (7 minutes):

Q&A (10 minutes):

Preventing Polluted Runoff Everybody's Business

Homeowners can prevent polluted runoff by using fertilizers and chemicals sparingly, maintaining septic systems, and picking up pet waste.

Farmers can prevent polluted runoff by managing soil and animal feeding operations and buffering streams with native trees and plants.

Developers and planners can prevent polluted runoff by using low impact development and providing structural and nonstructural controls.

ST. CLAIR COUNTY'S STORMWATER

GUIDE FOR BUSINESSES

Rain washes oil, fertilizer and other pollutants into storm drains...

...which flows untreated into lakes and streams.

You can help prevent water pollution by volunteering to apply drain markers to storm drains in your neighborhood.

Also, consider adopting a stream to keep trash out of our creeks.

DON'T DUMP
Drain Markers

Adopt a Stream

stop someone from ripping you off

You may not hear it.
You may not see it....
But you definitely pay for it.

Dumping waste into storm drains, ditches or waterways is illegal. Dumping contaminates drinking water supplies, recreation areas and wildlife habitat. Cleanup efforts cost millions of dollars each year. And that's your tax dollars hard at work.

Avoid getting ripped off. Report illegal dumping right away. Your action will help prevent further water contamination and reduce potential clean up costs.

**Fill It, Don't
Spill It!**

FUEL SPILLS ARE ILLEGAL

Spill Prevention And Clean-Up Plan

- Take the time to use precautions to prevent spills.
- Keep materials inside water-tight and rodent-proof containers.
- Sweep and mop frequently to reduce the amount of dirt and other residues that accumulate where you work.
- Clean up spills promptly if they do happen.
- Clean up without water whenever possible by sweeping.

“Please don’t soil our waters!”

It's no fish story: soil erosion
is our #1 water pollutant.

Storm Water Tips

- ⇨ Don't dispose of oil and other chemicals onto driveways, parking lots or storm drains. Use a recycling center.
- ⇨ Wash vehicles at commercial car washes that recycle their wastewater.
- ⇨ Store and dispose of all chemicals according to the manufacturer's recommendations.
- ⇨ Sweep parking lots and storage areas once a month. Dispose of the dirt and debris in the appropriate trash can.
- ⇨ Place trash in its proper closed container and pick up litter from others.
- ⇨ Cover materials stored outdoors to prevent excess runoff to storm water drains.
- ⇨ Use water for cleaning exterior area sparingly.

ST. CLAIR COUNTY'S RESIDENT STORMWATER GUIDE

Seven Simple Steps to Clean Water

- 1 Help keep pollution out of storm drains
- 2 Fertilize sparingly and carefully
- 3 Carefully store and dispose of household cleaners, chemicals, and oil
- 4 Clean up after your pet
- 5 Practice good car care
- 6 Choose earth-friendly landscaping
- 7 Save water

Our Water. Our Future. Ours to Protect.

I CAN'T PLAY IN THE STREAM ANYMORE IT'S YUCKY NOW

Carefully store and dispose of household cleaners, chemicals, and oil.

Did you know that many household products are dangerous to our kids, pets, and the environment?

These materials pollute our waterways if washed or dumped into storm drains or roadside ditches that lead directly to our lakes and rivers. Household cleaners, pesticides, gasoline, antifreeze, used motor oil, and other hazardous products need to be labeled, stored, and disposed of properly.

So what can you do? Simple.

- Be aware of household products that can harm children, pets and the environment. Pay attention to words such as "warning" or "caution" on product labels.
- Reduce waste and save money by purchasing only the materials you need.
- Keep unused products in their original containers with labels.
- Never dump hazardous products down storm drains, roadside ditches, sinks, or on the ground—take them to your local community's hazardous waste collection day.

Help keep our homes
and the environment safe.

www.inyourwater.org

If it's on the ground
it's in your water

Many things you put on your yard end up in the water nearby.

Send them packing! There are lots of less toxic ways to control pests in your home and garden without using harmful chemicals.

You can have a lush garden and pest-free home while keeping your family and our waterways healthy.

Auto leeches? Use air beds instead of poisonous sprays.

Stormwater Tips

- ⇨ Don't dispose of oil and other chemicals onto driveways, streets or storm drains. Use a recycling center.
- ⇨ Wash your car at commercial car washes that recycle their wastewater.
- ⇨ Dispose of all chemicals according to the containers.
- ⇨ Sweep driveways instead of hosing.
- ⇨ Do not overwater lawns and gardens.
- ⇨ Reduce the amount of fertilizers and pesticides you apply on your lawn and landscaping.
- ⇨ Place trash in closed containers and pick up litter from others.
- ⇨ Have your car tuned up and make sure it's not leaking fluids.
- ⇨ Pick up after your pets when you walk them.

STOP STORMWATER POLLUTION.

HELP YOUR WATERSHED!

STORMWATER MANAGEMENT

Everyone lives in a watershed, and it takes a community to maintain and protect it!

St. Clair County is looking for input on water quality concerns or issues in your watershed. If you have any information, please provide it online at:

co.st-clair.il.us/stormwater/concerns

However, no matter where you live in a watershed, you contribute to the health of local streams and rivers.

If you don't have information to contribute, you can still help improve the health of your watershed by following the guidance in this brochure!

BEST MANAGEMENT PRACTICES

618-825-2531

stormwater@co.st-clair.il.us

A riparian landowner

owns property adjacent to

a lake or stream. The

shoreline of a lake or

stream and the immediate

adjacent area is called a **riparian buffer**. Riparian

landowners are the last defense to protect our

lakes and streams.

Healthy riparian buffers serve many purposes such

as protecting water quality, reducing erosion,

enhancing wildlife habitat, minimizing impacts of

human activities, and providing positive

aesthetics.

What is a Watershed?

Area of land and water draining to a particular river, stream, lake or wetland

Riparian landowners enjoy benefits from the lake or stream's natural attributes and are responsible for maintaining the streambanks or lakeshore (and riparian buffer) on your property.

This brochure provides some helpful tips for maintaining a healthy riparian buffer. Riparian buffers should be at least 10 feet of dense native plants to grow along the water's edge and streambank to allow pollutants to filter out and the banks to stabilize.

LIVING ON THE WATER'S EDGE

Living on the water's edge refers to landowners that live at properties along the shoreline of a lake or stream and the immediate adjacent area; this is also referred to as **RIPARIAN BUFFER**.

Best Management Practices for Properties Adjacent to Streams and Lakes

DON'T DUMP!

Dumping yard waste and other debris in your riparian buffers and streams can cause stream blockages, elevate flood stages, and wash sediment and debris (excessive nutrients) into the water bodies.

- ◆ Never dispose of chemicals in the streams, lakes or riparian buffers.
- ◆ Never dispose of branches, leaves, or clippings in the riparian buffers.
- ◆ Remove fallen trees that block flows

FERTILIZE WISELY

One of the largest problems in Lake County streams and lakes is high amount of nutrients, which produce excessive growth of algae and other undesirable aquatic plants.

- ◆ Test your soil before fertilizing.
- ◆ Don't apply fertilizer before a rain event
- ◆ Be P-free with your fertilizers!
- ◆ Don't apply fertilizers to riparian buffers.

MINIMIZE STORMWATER RUNOFF

Impervious surfaces (roofs and driveways) convey runoff and pollution to our waterways. By minimizing impervious surfaces you can reduce the transport of sediment, chemicals, and other pollutants to waters.

- ◆ Disconnect flow from downspouts & sump pumps from the stream or lake and direct to a rain garden or bioswale

RIPARIAN BUFFER

RIGHT PLANT—RIGHT PLACE!

Deep rooted native plants and trees have long root systems to keep soils in place, absorb runoff, and filter out pollutants. When ground and banks are left bare, soil erodes and washes off into nearby lakes and streams.

- ◆ Remove invasive plants from your yard & riparian buffers
- ◆ Use deep rooted native plants in your landscaping—less water required

Rain Gardens are shallow depressions planted with native plants and are positioned to capture stormwater runoff.

OVERVIEW

Washing your car at home or at a local fundraiser can wreak havoc on nearby bodies of water, simply by sending pollutants like dirt, soap, oil, grease and metals, along with the wash water, into streams and river. Ideally, waste water from car washes should be emptied into a sanitary sewer (the system that transports wastewater to a treatment facility) if allowed by local jurisdiction.

The following suggestions are some other ways to make your car washes friendly to our local waterways.

REMEMBER: Only rain goes down the storm drain!

AT HOME:

- Pull your car onto the lawn before washing. You can water your lawn at the same time you wash your car.
- Use phosphate-free, biodegradable cleaning products.
- Avoid using degreasers, solvents and tire cleaning products.
- Wring out sponges and rags in a bucket, then empty the bucket into the sanitary sewer system, via sinks or toilets. You can also empty the bucket onto pervious landscaped areas where wastewater can be absorbed.
- Use a low-flow nozzle for your hose and turn it off when you're not using the water.
- Sweep up any debris (rather than hosing it to the street) and dispose of it in the garbage.
- If possible, take your car to a commercial car wash. These facilities use technology to achieve minimal water usage and discharge their water in a regulated and safe manner. Some car washes reuse water and even employ environmentally friendly soaps!
- **Bonus Tip:** Ensure you're regularly changing your oil to prevent excessive oil leakage.

AT A FUNDRAISER:

- Follow guidelines in the "At Home" section.
- Use a car wash kit to prevent soapy, dirty water from entering the storm sewer.
- Hold the event at commercial car wash. The increased traffic can benefit both the fundraiser and the commercial car wash!
- Sell tickets to a commercial car wash, where soapy water is disposed in a safe manner.
- Use earth-friendly cleaning products.
- Make use of a pressure washer. This will get the job done, but use less water.
- Follow the *Just Enough* principle. Use just enough soap and water needed to get the job done. Even if the soap is biodegradable, it can still have an effect on fish and invertebrates in our rivers. Less soap also means more of a profit for the charity!

What NOT to put in your Sharps Container:

- NOTHING other than sharps.
- No bandages, gauze, alcohol wipes, or other trash.
- No medications: over-the-counter or prescription.

Where to dispose of medications:

- CVS at 4609 W. Main St., Belleville
- CVS at 753 W. Hwy. 50, O'Fallon
- Walgreens at 5890 N. Belt West, Belleville
- Walgreens at 2510 State St., East St. Louis
- Copper Bend Pharmacy, Ste. 920B, Belleville
- Caseyville, Fairmont City, Fairview Heights, & O'Fallon Police Departments.
- St. Clair County Sheriff's Dept., entrance at 700 N. 5th St., Belleville

Our current grant ends on June 30, 2024. Full containers can be dropped off until that date.

RE: **LOCAL GOVERNMENT ONLY Used Tire Collection 2023**

The Illinois Environmental Protection Agency is pleased to sponsor a used tire collection for St. Clair County. This tire collection is for **Governmental Entities ONLY** and is **NOT open to the general public**. **No used tires from ULG fleets or from private entities are allowed.** Please **DO NOT** advertise this collection to the public.

The collection will be held on **Tuesday September 19, 2023 and Wednesday, September 20, 2023 from 8:00a.m. until 3:00p.m.** on both days.

Illinois Department of Transportation has graciously allowed the use of their property at **8313 Shiloh Valley Township Line Road, Lebanon, Illinois.**

Tires on rims, large truck, and tractor tires MUST be kept separate to facilitate unloading in a different area at the collection site.

Please take the necessary steps to ensure that mud and comingled waste materials (i.e. rocks/bricks, lumber, and garbage are removed from each load PRIOR to delivery.

EXHIBIT B.7-A

City of Fairview Heights
Public Meeting Agenda

Memo

To: Elected Officials
From: John Harty-Director of Public Works
CC: Directors
Date: February 12, 2024
Re: Director's Report

Surplus Vehicles – Bid Results

(Agenda Item 1)

Bids for the five surplus vehicles were accepted at City Hall on February 8 at 3:00 p.m. and read aloud at that time. The bid results have been attached to this agenda. Michael Harter provided the winning bids for all vehicles for the sum of \$1,578.88 for each Crown Victoria and \$3,678.88 for each Caprice.

Market Place Phase 2,3 Landscape & Lighting – Bid Results

(Agenda Item 2)

Bids for the second and third phases of the Market Place Streetscape – Landscape & Lighting were opened and read aloud at 2:00 p.m. on February 1. Mayer Landscaping was the only bidder with a proposal of \$2,042,695.50. That figure was above the Landscape Architect's Estimate of \$1,668,678.00, and around 3% higher than the one bid received in June of last year.

The funding for this project comes from TIF 3, which has a balance adequate to cover the construction costs. My recommendation is to award the contract to Mayer as prices are likely to increase or at best stay flat, through time.

Director's Report/Project Updates

(Agenda Item 3)

Longacre Drive Improvements – Bids for the Longacre Drive Improvements project were opened and read aloud in Springfield on January 19. Two bids were received, one from The Kilian Corporation for \$1,334,065.56 and the other from Christ Brothers Asphalt for 1,498,312.83. Neither bid was within a reasonable approximation of the engineer's estimate which was set at

\$957,006.00, and as such, the apparent low bid was not eligible for award from the State. (Bid results are attached.)

With the overall difference between the low bid and the estimate at roughly 40%, it has been that in order to reside within a reasonable approximation, the project limits need to be revised, or the project needs to be done in two phases. The problem with the two-phase approach is that it changes the intent of the STP application and would not be eligible for federal funding.

In order to be eligible for federal funding, the City would have to reapply for an STP grant with the project limits revised. We happen to be in a current STP/CMAQ cycle, applications due on February 8, so the Department, through its consultant, reapplied for the federal funding for this project as well as the Old Collinsville Road project.

Market Place, Phase 3 – Bids for the third phase of the Market Place project were received and opened in Springfield on Friday, January 19. Four bids were submitted, (bid results attached), and Stutz Excavating was read as the apparent low bidder. Their proposal of \$533,207.25 was within a reasonable approximation of the engineer's estimate, so with the City's concurrence, the State will award the contract to Stutz.

Stutz Excavating has performed well for the City in the past as they completed the first phase of the Lincoln Trail Sidewalks project as well as the demolition of the Ice Complex.

The STP grant, federal funding, will cover approximately \$320,000.00 of the project costs with the balance coming from the City's Motor Fuel Tax fund. Construction should begin in late March or early April.

MS – 4 Municipal Storm Sewer System Report - This report item is a necessary part of our MS-4 storm water permit that we hold as a municipality within an urbanized area with a population density of at least 500 people per square mile. One of the six requirements of the permit is to include a brief report at a public meeting.

The Department attends four quarterly meetings, usually held in Shiloh, associated with our MS-4 Stormwater permit. The meetings touch on various storm water related topics ranging from erosion control to storm water quality and testing.

As part of the permit requirement, Ogles Creek is tested for water quality every quarter to ensure that the overall health of the waterway is in good standing. The MS-4 National Pollutant Discharge Elimination System process is paid

from our General Fund with an annual budgeted amount of approximately \$6,000.00.

Attached to the agenda are a few slides associated with the program.

Asphalt Overlay/Oil and Chip – The Department intends to maintain the streets in the City through either an overlay or chip and seal coat depending on the surface type. Last year, the City bid out the oil and chip project and received no bids. The City will go out for bid sometime in the next couple months in the hopes of performing the needed oil and chip maintenance this summer when schools are out of session.

The Department will also generate plans and specifications for next year's Asphalt Overlay CIP item and during budget discussions will recommend that the budget figure once again be raised from \$200,000 to \$400,000. There are numerous streets currently eligible and increasing the budget allows us to address those roads sooner.

- **Forest Avenue Right-of Way Vacation** – *The surveyor has not yet completed the necessary work to determine the correct property line information. As soon as it is complete, a plat depicting the right-of-way to be vacated will be generated.*

The survey has yet to occur, but I have been assured it will take place in the next few weeks, weather depending.

- **Street Crew Concrete Projects** – *Currently, the crew is working on two sections of Liberty Road that have deteriorated beyond repair. From Liberty, the crew will head to the Country View Estates neighborhood to take care of issues on Lindenleaf Lane and Lindenleaf Lane at the intersection of Mapleleaf Lane. The concrete pavement in this subdivision is also in need of attention*

The weather has slowed the concrete repair work efforts but as soon as temperatures allow, the work will resume with the other lane of Liberty and subsequently proceed to Country View Estates.

- **Projects in Design**

- **Lincoln Highway Improvements**

Millennia Professional Services, the design engineer associated with this project, has completed all surveys and arrived at construction limits in order to submit an Environmental Survey Request to Local Roads. The survey will likely take a number of months so the Improvements to Lincoln Highway will likely take place next year.

➤ **Lincoln Trail Sidewalk Improvements**

The design work for the latest phase, Union Hill to Bunkum Road, has resumed after a break due to COVID and its effect on finances. Horner and Shifrin has been back to work for a couple of months and has completed roughly half of the engineering necessary. Next budget year, construction of the sidewalks will resume.

➤ **Fairview Hills Subdivision**

The plans are approximately 60% complete. It is still the intent to reconstruct the streets in this subdivision during the next fiscal year.

MOTIONS

Agenda Item 1

Move to send to City Council with the recommendation of approval the sale of the following:

2004 Ford Crown Victoria to Michael Harter for the sum of \$1,578.88

2008 Ford Crown Victoria to Michael Harter for the sum of \$1,578.88

2014 Chevrolet Caprice to Michael Harter for the sum of \$3,678.88

2014 Chevrolet Caprice to Michael Harter for the sum of \$3,678.88

Agenda Item 2

Move to send to City Council with the recommendation of approval the contract with Mayer Landscaping, Inc. for the Market Place Streetscape Phases 2 and 3 Landscape & Lighting project for the sum of \$2,042,695.50.

BMP Training
Erosion & Sediment Control

Why Control Erosion and Sedimentation?

Sedimentation from erosion causes the following impacts:

1) Physical Impacts

- Damages aquatic areas and property
- Increases flooding effects
- Strains public infrastructure
- Increases maintenance costs

2) Biological Impacts

- Hinders plant growth
- Kills organisms and fish
- Disrupts the food chain

Controlling Erosion and Sedimentation

Best Management Practices

Stabilize Exits:

- Fabric Lined
- Clean 2-3" Stone
- Sweeping is in conjunction with, not instead of, stabilized access
- Can use rumble grates

Controlling Erosion and Sedimentation

Best Management Practices

Perimeter Controls

- Adequate for drainage area and site conditions
- Shouldn't be the only BMP
- Properly Installed and Maintained

Controlling Erosion and Sedimentation

Best Management Practices

Outfalls & Stormwater Ponds

- Check for discharges off site or the MS4
- Turbidity, erosion, stabilization

Controlling Erosion and Sedimentation

Best Management Practices

Inlet Protection

- Sock pipes are not preferred
- Filter fabric must go over grate
- Be maintained

Illinois Department of Transportation

		Final Cover Established:	_____ acre

Erosion and Sediment Control Practices

Item # / BMP		YES	NO	N/A
1. Slopes:	Do all slopes and exposed areas where soil disturbing activities have temporarily or permanently ceased, and not permanently stabilized, have adequate temporary seed or other stabilization in accordance with the NPDES permitted 7 and 14 day rule?	☐	☐	☐
2. Ditches	Are all ditches (existing and temporary) clear of sediment and/or debris? Do all ditches have adequate stabilization and structural practices in place?	☐ ☐	☐ ☐	☐ ☐
3. Perimeter Erosion Barrier:	Are all perimeter erosion barriers in good working order? Has perimeter barrier no longer needed been removed and the area stabilized?	☐ ☐	☐ ☐	☐ ☐
4. Temporary Ditch Checks:	Are all temporary ditch checks in good working order? Are the current ditch checks adequate to control erosion?	☐ ☐	☐ ☐	☐ ☐
5. Temp Diversions/ Slope Drains:	Are all Temporary Diversions and Slope Drains functioning properly?	☐	☐	☐
6. Inlet Protection:	Are ALL inlet protection devices in good working order? Are ALL inlet filters less than 25% full and fabric unobstructed?	☐ ☐	☐ ☐	☐ ☐
7. Sediment Basins/Traps:	Are ALL sediment basins/traps in good working order? Does sufficient capacity exist for the design stormwater event?	☐ ☐	☐ ☐	☐ ☐
8. Areas of Interest – Wetland/Prairie/Tree Preservation:	Has the contractor remained clear of all designated "no entry" areas? Are all "no intrusion" areas adequately marked to prevent accidental entry?	☐ ☐	☐ ☐	☐ ☐
9. Stock Piles:	Are all stockpiles properly situated and maintained to prevent runoff and protected to minimize discharge of materials or residue in case of erosion?	☐	☐	☐
10. Borrow/Waste Sites:	Are all borrow and waste locations, including those located offsite, in compliance with NPDES requirements?	☐	☐	☐
11. Other Installations:	Are all other BMP installations shown in the plans properly functioning? (note in comments)	☐	☐	☐

General Site Maintenance Required of the Permit

12. Vehicle Tracking:	Is the site free from mud, sediment and debris from the vehicles entering/leaving off road areas throughout the site?	☐	☐	☐
	Are Stabilized Construction field entrances properly located?	☐	☐	☐
	Are Stabilized Construction field entrances in good working condition?	☐	☐	☐

Item # / BMP		YES	NO	N/A
13. Concrete Washout Areas:	Are concrete washout areas adequately signed and maintained? Has all washout occurred only at designated washout locations?	☐	☐	☐
14. Staging/Storage Areas:	Are all staging/storage facilities free of litter, leaking containers, leaking equipment, spills, etc?	☐	☐	☐
15. Fuel/Chemical Storage:	Are all fuels and chemicals stored only in designated locations? Are all designated locations free of evidence of leaks and or spills?	☐	☐	☐
16. Previous Inspection Follow Up:	Have all corrections from the last report been properly completed? If not, has a NPDES/ESC Deficiency Deduction been assessed?	☐	☐	☐
17. Update SWPPP:	Have all changes to the projects SWPPP been noted on the graphic site plan, signed and dated?	☐	☐	☐
18. Off-site Discharge of Sediment:	Has sediment or other pollutants of concern been released from the project site? If Yes, has the Illinois Environmental Protection Agency been notified within 24 hours of your observation of the discharge and an Incidence of Non-Compliance (ION) mailed within 5 days?	☐	☐	☐

Specific Instructions Related to "No" Answers From Above:

Item #	Station or Station to Station	Practice	Comments/Actions Required	Time for Repair

Other Comments:

Additional Pages (Attached As Needed)

☐ Outfalls / Receiving Waters
 ☐ Drainage Structure/Ditch Check Locations
 ☐ Additional Instructions to Contractor
 Other: _____

If the answer to any of Items 1-16 above is "No", the contractor is hereby ordered to correct the deficiency. Repairs and stabilization are to be completed within 24 hours of this report (or as indicated above) or the DAILY NPDES/ESC Deficiency Deduction will be assessed for each noted deficiency until the required action is completed.

BMP Training

Post Construction Management

Stormwater Best Management Practice

General Construction Site Waste Management

Minimum Measure: Construction Site Stormwater Runoff Control
Subcategory: Good Housekeeping/Materials Management

Description

Construction staff manage and dispose of building materials and other construction site wastes to reduce the risk of pollution to stormwater. Practices such as trash disposal, recycling, proper material handling, and spill prevention and cleanup measures can reduce the potential for stormwater flow to mobilize construction site wastes and contaminate surface or ground water.

Applicability

Proper management and disposal of wastes will reduce pollution in stormwater discharge from any construction site. Good waste management practices include properly locating refuse piles, covering materials that stormwater discharges might displace, and preventing spills and leaks from hazardous materials.

Siting and Design Considerations

Waste management practices vary depending on the type of waste being managed, whether it is hazardous, and whether it might contaminate stormwater. Below are examples of management practices for different categories of construction site waste.

General Solid Wastes:

- Designate a waste collection area on-site that does not receive a substantial amount of stormwater flow from upland areas and does not drain directly to a waterbody.
- Ensure that containers have lids to cover them when it rains, or keep containers in a covered area whenever possible.
- Schedule waste collection to prevent the containers from overfilling.
- Clean up spills immediately. Use an absorbent material such as sawdust or cat litter to contain the spill.
- During the demolition phase of construction, provide extra containers and schedule more frequent pickups.
- Collect, remove and dispose of all construction site wastes at authorized disposal areas. Contact a local environmental agency to identify these disposal sites.

Construction waste should be collected in designated waste collection areas on-site, such as metal dumpsters.

Hazardous Materials and Wastes:

- For spills of hazardous materials, follow cleanup instructions on the package or, if applicable, the Safety Data Sheet.
- Consult with local waste management authorities about the requirements for disposing of hazardous materials.
- Never remove the original product label from the container—it contains important safety information. Follow the manufacturer's recommended method of disposal, which should appear on the label.
- Never mix excess products when disposing of them, unless the manufacturer specifically recommends doing so.
- For soils containing hazardous substances, consult with state or local solid waste regulatory agencies or private firms to ensure proper disposal. Some landfills might accept contaminated soils, but they require laboratory tests first.
- Construction staff often use sandblasting to remove paint and dirt from surfaces. This produces sandblasting grits—sand and paint and dirt particles. Sandblasting grits from older structures are hazardous, because they are more likely to contain lead-, cadmium- or chrome-based paints. To ensure

proper disposal of sandblasting grits, contract with a licensed waste management or transport and disposal firm.

Pesticides and Fertilizers:

- Follow all federal, state and local regulations that apply to the use, handling or disposal of pesticides and fertilizers.
- Do not handle the materials any more than necessary.
- Store pesticides and fertilizers in a dry, covered area.
- Construct berms or dikes to contain stored pesticides and fertilizers in case of spillage.
- Follow the application rates and methods specified on the product label.
- Have equipment and absorbent materials available in storage and application areas to contain and clean up any spills.

Petroleum Products:

- Store new and used petroleum products for vehicles in covered areas with berms or dikes in place to contain any spills.
- Immediately contain and clean up any spills with absorbent materials.
- Have equipment available in fuel storage areas and in vehicles to contain and clean up any spills.

Detergents:

- Detergents that contain phosphorus and nitrogen are common in wash water for cleaning vehicles. Excesses of these nutrients can be a major source of water pollution. Use detergents only as recommended and limit their use on the site. Do not dump wash water containing detergents into the storm drain system; direct it to a sanitary sewer or

capture and contain it for transport to a wastewater treatment plant for proper treatment.

Limitations

An effective waste management system requires training and signage to promote awareness of the hazards of improper storage, handling and disposal of wastes. Site superintendents should be aware of worker habits and inspect storage areas regularly. They may need to spend extra management time to ensure that all workers are following the proper procedures.

Maintenance Considerations

Construction staff should inspect storage and use areas and identify containers or equipment that could malfunction and cause leaks or spills. In addition, it is important for staff to check equipment and containers for leaks, corrosion, support or foundation failure, or other signs of deterioration, and test them for soundness. Construction staff should immediately repair or replace any defective containers.

Effectiveness

Waste management practices are effective only when all construction staff follow them consistently. In storage and use areas, site superintendents should post the guidelines for proper handling, storage and disposal of construction site wastes. In addition, site superintendents should ensure that workers receive training in these practices to ensure that everyone is knowledgeable enough to participate.

Cost Considerations

The costs associated with construction site waste management include purchasing and posting signs, increased management time for oversight, additional labor needed for special handling of wastes, transportation costs for waste hauling, and fees charged by disposal facilities to take the wastes.

Additional Information

Additional information on related practices and the Phase II MS4 program can be found at EPA's National Menu of Best Management Practices (BMPs) for Stormwater website

3.1 – Construction Rainfall Erosivity Waiver

Industrial "No Exposure"

4.0 – Conditional No Exposure Exclusion for Industrial Activity

This fact sheet profiles the Post-Construction Runoff Control minimum control measure, one of six measures that the operator of a Phase II regulated small municipal separate storm sewer system (MS4) is required to include in its stormwater management program in order to meet the conditions of its National Pollutant Discharge Elimination System (NPDES) permit. This fact sheet outlines the Phase II Final Rule requirements for post-construction runoff control and offers some general guidance on how to satisfy those requirements. It is important to keep in mind that the small MS4 operator has a great deal of flexibility in choosing exactly how to satisfy the minimum control measure requirements.

Why Is The Control of Post-Construction Runoff Necessary?

Post-construction stormwater management in areas undergoing new development or redevelopment is necessary because runoff from these areas has been shown to significantly affect receiving waterbodies. Many studies indicate that prior planning and design for the minimization of pollutants in post-construction stormwater discharges is the most cost-effective approach to stormwater quality management.

There are generally two forms of substantial impacts of post-construction runoff. The first is caused by an increase in the type and quantity of pollutants in stormwater runoff. As runoff flows over areas altered by development, it picks up harmful sediment and chemicals such as oil and grease, pesticides, heavy metals, and nutrients (e.g., nitrogen and phosphorus). These pollutants often become suspended in runoff and are carried to receiving waters, such as lakes, ponds, and streams. Once deposited, these pollutants can enter the food chain through small aquatic life, eventually entering the tissues of fish and humans. The second kind of post-construction runoff impact occurs by increasing the quantity of water delivered to the waterbody during storms. Increased impervious surfaces (e.g., parking lots, driveways, and rooftops) interrupt the natural cycle of gradual percolation of water through vegetation and soil. Instead, water is collected from surfaces such as asphalt and concrete and routed to drainage systems where large volumes of runoff quickly flow to the nearest receiving water. The effects of this process include streambank scouring and downstream flooding, which often lead to a loss of aquatic life and damage to property.

What Is Required?

The Phase II Final Rule requires an operator of a regulated small MS4 to develop, implement, and enforce a program to reduce pollutants in post-construction runoff to their MS4 from new development and redevelopment projects that result in the land disturbance of greater than or equal to 1 acre. The small MS4 operator is required to:

- ☐ Develop and implement strategies which include a combination of structural and/or non-structural best management practices (BMPs);
- ☐ Have an ordinance or other regulatory mechanism requiring the implementation of post-construction runoff controls to the extent allowable under State, Tribal or local law;

- ☐ Ensure adequate long-term operation and maintenance of controls;
- ☐ Determine the appropriate best management practices and measurable goals for this minimum control measure.

What Is Considered a “Redevelopment” Project?

The Phase II Final Rule applies to “redevelopment” projects that alter the “footprint” of an existing site or building in such a way that there is a disturbance of equal to or greater than 1 acre of land. Redevelopment projects do not include such activities as exterior remodeling. Because redevelopment projects may have site constraints not found on new development sites, the Phase II Final Rule provides flexibility for implementing post-construction controls on redevelopment sites that consider these constraints.

What Are Some Guidelines for Developing and Implementing This Measure?

This section includes some non-structural and structural BMPs that could be used to satisfy the requirements of the post-construction runoff control minimum measure. It is important to recognize that many BMPs are climate-specific, and not all BMPs are appropriate in every geographic area. Because the requirements of this measure are closely tied to the requirements of the construction site runoff control minimum measure (see Fact Sheet 2.6), EPA recommends that small MS4 operators develop and implement these two measures in tandem.

☐ Non-Structural BMPs

- **Planning Procedures.** Runoff problems can be addressed efficiently with sound planning procedures. Local master plans, comprehensive plans, and zoning ordinances can promote improved water quality in many ways, such as guiding the growth of a community away from sensitive areas to areas that can support it without compromising water quality.
- **Site-Based BMPs.** These BMPs can include buffer strip and riparian zone preservation, minimization of disturbance and imperviousness, and maximization of open space.

☐ Structural BMPs

- **Stormwater Retention/Detention BMPs.** Retention or detention BMPs control stormwater by gathering runoff in wet ponds, dry basins, or multichamber catch basins and slowly releasing it to receiving waters or drainage systems. These practices can be designed to both control stormwater volume and settle out particulates for pollutant removal.

- **Infiltration BMPs.** Infiltration BMPs are designed to facilitate the percolation of runoff through the soil to ground water, and, thereby, result in reduced stormwater runoff quantity and reduced mobilization of pollutants. Examples include infiltration basins/trenches, dry wells, and porous pavement.

- **Vegetative BMPs.** Vegetative BMPs are landscaping features that, with optimal design and good soil conditions, remove pollutants, and facilitate percolation of runoff, thereby maintaining natural site hydrology, promoting healthier habitats, and increasing aesthetic appeal. Examples include grassy swales, filter strips, artificial wetlands, and rain gardens.

What Are Appropriate Measurable Goals?

Measurable goals, which are required for each minimum control measure, are intended to gauge permit compliance and program effectiveness. The measurable goals, as well as the BMPs, should reflect needs and characteristics of the operator and the area served by its small MS4. Furthermore, the measurable goals should be chosen using an integrated approach that fully addresses the requirements and intent of the minimum control measure.

EPA has developed a Measurable Goals Guidance for Phase II MS4s that is designed to help program managers comply with the requirement to develop measurable goals. The guidance presents an approach for MS4 operators to develop measurable goals as part of their stormwater management plan. For example, an MS4 program goal might be to reduce by 30 percent the road surface areas directly connected to storm sewer systems (using traditional curb and gutter infrastructure) in new developments and redevelopment areas over the course of the first permit term. Using “softer” stormwater conveyance approaches, such as grassy swales, will increase infiltration and decrease the volume and velocity of runoff leaving development sites. Progress toward the goal could be measured by tracking the linear feet of curb and gutter not installed in development projects that historically would have been used.

Or

Call us at 618-825-2531

WHAT ARE BEST MANAGEMENT PRACTICES?

Stormwater best management practices (BMPs) are techniques, measures or structural controls used to manage the quantity and improve the quality of stormwater runoff. The goal of BMPs is to mimic the natural way water moved through an area before development by using design techniques to infiltrate, evaporate, and reuse runoff close to its source. BMPs help reduce the amount of and improve the quality of stormwater runoff. Please preserve our streams by utilizing these BMPs.

QUICK FIXES

Rain barrels are an easy and inexpensive way to capture and store runoff falling from gutters. The stored water can later be used to water gardens and lawns. You can make your own barrels or purchase them locally with simple installation. Another easy fix is adding a rain garden to your property. This attractive BMP is effective in reducing the amount of runoff leaving your property. Rain gardens utilize native plants with deep roots to absorb runoff, filter pollutants and promote groundwater recharge. Even simple changes in habit can be a BMP. For example, using phosphate-free products when washing your car or fertilizing your lawn go a long way in reducing pollutants in stormwater runoff. Something as small as cleaning up after your pet and ensuring litter is properly disposed of can also help.

CONSTRUCTION SOLUTIONS

Some BMPs require more involvement, but should be considered when building or renovating homes. For example, green roofs are an excellent way to decrease the amount of runoff leaving your property. Green roofs not only utilize water where it falls, but help prevent urban heat islands. Green roofs are a more expensive upgrade to your property, but they save money on heating and cooling costs. They can also be constructed on flat and sloped surfaces. A permeable paver is another BMP used as an alternative to traditional concrete or asphalt paving. The pavers decrease runoff by allowing water to seep into cracks that are filled with an aggregate. Remember, anything you can do to reduce pollutants in St. Clair County streams helps everyone!

REMEMBER...

- Use permeable pavers instead of asphalt or concrete.
- Plant rain gardens using native species.
- Mix composts into lawns and gardens to use for fertilizer.
- Install rain barrels and use it to water your plants and lawn.
- Don't use your hose as a broom.
- Build green vegetated roofs.
- Keep your vehicle regularly maintained and free of leakage.
- Use phosphate-free products outdoors.
- Put litter in its place.
- Use alternative deicing methods on your driveway in the winter.
- Clean up animal waste.
- Properly dispose of grass clippings and leaves.
- Wash your car on the lawn.
- Report illicit discharge into sewers and streams.

Best Management Practices for Good Housekeeping

Follow these BMPs to control pollutant discharges. The objectives are: 1) to keep pollutants from contacting rain, and 2) to keep pollutants from being dumped or poured into the storm drains. The goal is "only rain in the storm drain."

Activities

Best Management Practices

- | | |
|----------------------------|---|
| Pavement Cleaning | <ul style="list-style-type: none">• Sweep parking lots and other paved areas periodically to remove debris. Dispose of debris in the garbage.• If outdoor pavement cleaning with detergent is required, collect wash water and dispose in indoor sinks or drains for discharge to the sanitary sewer. Contact your local wastewater treatment agency. |
| Litter Control | <ul style="list-style-type: none">• Provide an adequate number of trash receptacles for your customers and employees. This helps keep trash from overflowing the receptacles.• Pick up litter and other wastes daily from outside areas including storm drain inlet grates. |
| Waste Disposal* | <ul style="list-style-type: none">• Inspect dumpsters and other waste containers periodically. Repair or replace leaky dumpsters and containers.• Cover dumpsters and other waste containers.• Never dispose of waste products in storm drain inlets.• Recycle wastes or dispose properly. |
| Materials Storage* | <ul style="list-style-type: none">• Store materials such as grease, paints, detergents, metals, and raw materials in appropriate, labeled containers.• Make sure all outdoor storage containers have lids, and that the lids are adequately closed.• Store stockpiled materials inside a building, under a roof, or covered with a tarp to prevent contact with rain. |
| Training | <ul style="list-style-type: none">• Train employees regularly on good housekeeping practices.• Assign a person to be responsible for effective implementation of BMPs. |
| Equipment/Vehicle Cleaning | <ul style="list-style-type: none">• Maintain equipment and vehicles regularly. Check for and fix leaks.• Use drip pans to collect leaks or spills during maintenance activities.• Wash equipment/vehicles in a designated and/or covered area where the wash water is collected to be recycled or discharged to the sanitary sewer. Contact your local wastewater treatment agency. |

Some Facilities will require structural control BMPs if simpler operation ones are not adequate for keeping pollutant discharges from the storm drains.

* Hazardous materials must comply with hazardous materials storage and disposal requirements.

IACE Fall Conference, October 5-6, 2023
Professional Development Hours Completion Certificate

NORMAN ETLING, received the below checked Professional Development Hours (PDH) for a maximum of (9.5) PDHs for attending the Illinois Association of County Engineers Fall Conference held at the Vibrant Arena, October 5-6, 2023.

Attendee-please check each line for the session(s) you attended and write the sum of your PDH gained on the line below.

General Session: Thursday 9:00 a.m. - 5:00 p.m.

- ☒ Illinois Department of Transportation Local Roads Update
- ☒ Federal Highway Administration Update
- ☒ Illinois Department of Transportation Bridge Update
- ☒ IDOT District 4 Chip Seal Manual
- ☐ The GEC Experience; From I-74 to I-39
- ☒ Illinois Department of Transportation Update
- ☒ IDFPR Rules
- ☒ Design Build
- ☒ State Floodplain Permitting System
- ☒ Cost-Effective Bridge Replacement and Rehabilitation Solutions

Morning Speaker: Friday 8:00 a.m.

____ National Association of County Engineers Update, President Jeff Blue & NACE
Executive Director Kevan Stone

7.5 Total Professional Development Hours

Thank you for attending the 2023 IACE Fall Conference.

RE: NPDES/Ogles

WorkOrder: 23021126

Dear Tony Schenk, P.E.:

TEKLAB, INC received 2 samples on 2/16/2023 1:18:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Marvin L. Darling
Project Manager

RE: NPDES/Ogles

WorkOrder: 23060629

Dear Tony Schenk, P.E.:

TEKLAB, INC received 2 samples on 6/8/2023 11:18:00 AM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Marvin L. Darling

RE: NPDES/Ogles

WorkOrder: 23091547

Dear Tony Schenk, P.E.:

TEKLAB, INC received 2 samples on 9/21/2023 12:13:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Marvin L. Darling
Project Manager

Abbr Definition

* Analytes on report marked with an asterisk are not NELAP accredited

CCV Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.

CRQL A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.

DF Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.

DNI Did not ignite

DUP Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.

ICV Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.

IDPH IL Dept. of Public Health

LCS Laboratory control sample is a sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.

LCSD Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MBLK Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.

MDL "The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."

MS Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).

MSD Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MW Molecular weight

NC Data is not acceptable for compliance purposes

ND Not Detected at the Reporting Limit

NELAP NELAP Accredited

PQL Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.

RL The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.

RPD Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).

SPK The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.

Surr Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.

TIC Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"

TNTC Too numerous to count (> 200 CFU)

RE: NPDES/Ogles

WorkOrder: 23111666

Dear Tony Schenk, P.E.:

TEKLAB, INC received 2 samples on 11/21/2023 1:26:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Marvin L. Darling
Project Manager

Shipping container/cooler in good condition?	Yes ☒	No ☐	Not Present ☐	Temp °C 5.0
Type of thermal preservation?	None ☐	Ice ☒	Blue Ice ☐	Dry Ice ☐
Chain of custody present?	Yes ☒	No ☐		
Chain of custody signed when relinquished and received?	Yes ☒	No ☐		
Chain of custody agrees with sample labels?	Yes ☒	No ☐		
Samples in proper container/bottle?	Yes ☒	No ☐		
Sample containers intact?	Yes ☒	No ☐		
Sufficient sample volume for indicated test?	Yes ☒	No ☐		
All samples received within holding time?	Yes ☒	No ☐		
Reported field parameters measured:	Field ☐	Lab ☐	NA ☒	
Container/Temp Blank temperature in compliance?	Yes ☒	No ☐		

When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.

Water – at least one vial per sample has zero headspace?	Yes ☐	No ☐	No VOA vials ☒
Water - TOX containers have zero headspace?	Yes ☐	No ☐	No TOX containers ☒
Water - pH acceptable upon receipt?	Yes ☒	No ☐	NA ☐
NPDES/CWA TCN interferences checked/treated in the field?	Yes ☐	No ☐	NA ☒

Any No responses must be detailed below or on the COC.

Preservation checks for O&G analysis are to be completed by the laboratory technician prior to analysis. - MaryKemp - 11/21/2023 1:58:28 PM

pH strip #90719. - MaryKemp - 11/21/2023 1:58:30 PM
